1. Fold the white corner away from the camouflage side. Repeat for the other side.

2. Fold the paper in half down the centre of the plane.

6. Fold the wing out. Repeat for the other side.

7. Fold the wings up along line and fold back down, to make wings level.
3. To make the tail, fold along this corner over and back to form a crease.

4. Fold inwards then push the tail back up through the centre of the plane.

5. Fold along this line to reveal the camouflage print. Repeat for the other side.

Delta wings became popular with the invention of the jet engine. Not only do they have a strong structure and are an easier build than previous wing designs, they also have more fuel storage than planes with tapered wings such as the Spitfire or Lancaster.

TIP: See how adding a paperclip on the nose effects the lift, thrust, drag and weight of your Vulcan.
